New vaccines comprising Sp128 or Sp130 polypeptides, for treating and preventing pneumococcal infections, particularly infections caused by Streptococcus, e.g. otitis media, nasopharyngeal, bronchial, lung or blood infections.

Claim 8; Page 51-54; 54pp; English.

The invention relates to novel immunogenic polypeptides, Sp128 and Sp130 from S. pneumoniae. Vaccines comprising the polypeptides are useful for the treatment and prevention of pneumococcal infections, particularly infections caused by Streptococcus, such as critis media, nasopharyngeal bronchial, lung or blood infections. The antigens are used as immunogenic agents to stimulate an immune response. The antisera and antibodies may also be used in diagnosing and treating pneumococcal infections.

Recombinant polypeptides serve as a mechanism for stimulating production of antibodies for use in passive immunotherapy, diagnostic reagents, and

þe

```
This sequence represents a Streptococcus pneumoniae protein of the invention. The proteins (or their homologues, derivatives and/or fragments) are useful as immunogenic or antigens. Immunogenic or antigenic compositions comprising the proteins are useful as vaccines and also in diagnostic assays. The sequences are useful for the detection or diagnostis of S. pneumoniae infection, by contacting a sample to be tested with them. Agents capable of antagnosis of interfering with the function or expression of the protein or polypeptide are useful in medical compositions in the treatment or prophylaxis of S. pneumoniae infection. As the sequences can be used to treat S. pneumoniae infection, they can be used to treat bacterial pneumonia, which has high rates in young children, the elderly, and in patients with predisposing conditions such as asplenia, heart, lung and kidney disease, diabetes, alcoholism,
                                                                                                                                  ö

Also included are an antibody which binds one of the proteins treating a patient by administering the protein, DNA or antibody (in a composition), as kit comprising first and second primers, which are the nucleic acid cited above or fragments between nucleocides 8-100 of a sequence not defined in the specification, for amplifying a target
                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bacterial meningitis; pneumonia; sepsis; otitis media; ear infection; antiinflammatory; antibacterial; immunostimulant; auditory; respiratory; gene therapy; vaccine.

the first primer is substantially complementary to the target sequence can the second primer is substantially complementary to the complement of the target sequence and the second primer is substantially complementary to the complement of the target sequence, and where the parts of the primers having the target sequence, and where the parts of the primers having substantial complementarity define the termin of the target sequence to be amplified, assay comprising contacting a test compound with the protein, and determining whether the test compound binds to the protein and a Streptococcus pneumoniae bacterium, where one or more genes concoding the proteins has been rendered inactive. The proteins, nucleic acid molecules, antibody and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus caid molecules, antibody and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus media or ear infection. They are also useful in developing vaccines, diagnostics and antibiotics. The methods are useful for identifying immunodominant proteins. The present sequence is one of the 2469 proteins expressed by the identified coding regions from the genomic sequence. Note: The sequence data for this patent did not form part of the printed secundarication, but was obtained in electronic format directly from WIPO at Espandardise os field)

The hivenicon relates to an isolated miciacic actic decipitation where expression of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the mucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway compliferation or the activity of a gene in an operon required for cequired for proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a gene required for cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene or compound that inhibits the compound's activity; (11) a culture comprising strains in which the strains is present in a culture or collection of an organism. The attisense nucleic acids required for proliferation to isolate candidate molecules for rational correlation of an organism. The antisense nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pheumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes molecules acids are useful correlated are target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the sequences. ö New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. 1 HRVTVTIQNGKEMSSTIVSBEDFILPVYKGELEKGYQPDGWEISGFEGKKDAGYVINLSK 0; Gaps The invention relates to an isolated nucleic acid comprising any Length 2140; 0; Indels 100.0%; Score 748; DB 6; 100.0%; Pred. This invention relates to novel nucleic acids encoding hyperimmune serum reactive antigens selected from peptides and serum reactive epitopse that can be used in pharmaceutical compositions that exhibit antibacterial activity. The present invention describes a composition (including the nucleic acid molecule, hyperimmune serum-reactive antigen or antibody) that is useful for manufacturing a medicament such as a vaccine, which can be used to treat or prevent bacterial infections, particularly S. pneumoniae infections that cause pharyngitis, otitis media, pneumonia, bactersemia sepals and meningitis. The antigen or its fragment may also be used for isolating, purifying and/ or identifying an interaction partner of the hyperimmune serum reactive antigen, as well as for manufacturing a functional nucleic acid selected from aptemers and from ribozymes, antisense nucleic acid selected from reactive antigen sequence is a Streptococcus pneumoniae hyperimmune serum reactive antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1963 HRVTVTIQNGKEMSSTIVSEEDFILPVYKGELEKGYQFDGWEISGFEGKKDAGYVINLSK 2022

                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to novel isolated Streptococcus pneumoniae nucleic acid molecules and the antigenic polypeptides encoded by them. The invention may be useful for the production of compounds with an antibacterial activity or for gene therapy. The nucleic acid molecules, compositions and methods disclosed are useful for treating Streptococcus pneumoniae infection. The present sequence is that of an S pneumoniae protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DTFIKPVFKLIBEKKEEENKPTFDVSKKKDNPQVNHSQL/NESHRKEDLQREEHSQKSDST 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠ
                                                                                                                                                                                                      The invention relates to an isolated mucleic acid comprising a sequence encoding a Streptococcus pneumoniae ADR91366polypeptide, or its encoding a Streptococcus pneumoniae ADR91366polypeptide, or its encoding a Streptococcus pneumoniae ADR91366polypeptide, or its a CR894489, ADR94800, ADR948017, ADR948059, ADR95533, ADR95642, ADR95682, ADR96079) or any of the fully defined sequences appearing as ADR91705, CC ADR94186, ADR92197, ADR92134, ADR93039, ADR93079, ADR95360 or ADR93476 or at least 20 or 30 consecutive nucleotides of the nucleotide sequence. CC ADR93476 or at least 20 or 30 consecutive nucleotides, which is hybridisable under high stringency conditions to the nucleotide sequence. The nucleic acids and proteins are chosen from 5206 disclosed sequences. The nucleic acid cited above operably linked to a transcription regulatory comprising at least 20 consecutive nucleotide of the present comprising at least 20 consecutive nucleotides of the nucleotide sequences as cited above. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of pathological conditions resulting from bacterial infection by the present sequence is one of the 2603 disclosed S. CC pneumoniae protein sequence is one of the 2603 disclosed S. CC pneumoniae protein sequence is one of the 2603 disclosed S. CC pneumoniae protein sequence is one of the 2603 disclosed S. CC pneumoniae protein sequence is one of the 2603 disclosed S. CC pneumoniae protein sequence is one of the 2603 disclosed S. CC pneumoniae protein sequence. Note: The sequence data for this patent did sequence of the printed specification, but was obtained in cc sequence. The sequence of the presence of the printed specification, but was obtained in cc sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                460 HRVTVTIQNGKEMSSTIVSEEDFILPVYKGELEKGYQPDGWEISGFEGKKDAGYVINLSK 519

The invention relates to an isolated nucleic acid molecule for detecting, preventing or treating pathological conditions resulting from bacterial confreents infection. The isolated nucleic acid comprises: (a) any of the 2603 mucleotide sequences of ARA57336; (b) a nucleotide sequence of ARA57339; (b) a nucleotide sequence of ARA57339; (c) a nucleotide sequence of at least 8 nucleotides in length, where the sequence is hybridizable to a nucleic acid having any of the nucleotide sequence of at least 8 nucleotides in length, where the sequence is hybridizable to a nucleic acid having any of the nucleotide sequence of a). Also described: (l) a recombinant expression vector; (3) producing an consisting of at least 8 nucleotides of any of ARA57336 to ARA57339; (5) a cell comprising the recombinant expression vector; (3) producing an consisting of at least 8 nucleotides of any of ARA57336; (5) a cell comprising the recombinant expression vector; (3) producing an consisting a subject for S. pneumoniae polypeptide; (6) a recombinant or consisting a subject for S. pneumoniae of properties of a subsequence composition of an S. pneumoniae polypeptide or its subsequence composition for preventing or treating an amount of the above nucleic acid or polypeptide; (7) a vaccine composition for preventing or treating an expension of a S. pneumoniae polypeptide or its computer readable medium having recorded the nucleotide sequences (c) ARA57339; (10) a computer based system for identifying fragments of the Streptococcus genome of commercial importance. The composition and methods are useful for diagnosing, preventing or treating computer represents a S. pneumoniae of the printed specification, but was obtained in electronic format diagnosing in el
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                               The invention relates to isolated Streptococcus pneumoniae nucleic acids and polypeptides. The nucleic acids and proteins are useful for disgnosing, preventing and treating pathological conditions resulting from bacterial infection, such as S. pneumoniae infection. These may also be used for drug screening procedures. The present sequence represents a Streptococcus pneumoniae polypeptide of the invention. Note: The sequence data for this patent did not appear in the printed specification but was obtained in electronic format directly from USPTO at

The present sequence represents a protein from Streptococcus pneumoniae.

The nucleic acid sequence encoding the Streptococcus pneumoniae protein

can be useful in vaccines for inducing protective antibodies against
Streptococcus pneumoniae, for treatment or prevention of infection e.g.

streptococcus pneumonia, or treatment or prevention of infection e.g.

maplification methods or meningicis. Probes based on the nucleic acid
amplification methods, also for isolating Streptococcus genes or that
amplification methods, also for isolating Streptococcus genes or that
antibodies in standard immunossays, especially for diagnosing or
monitoring infections. Antibodies which bind the protein are used to
detect corresponding antigens, to purify the protein and for passive
immunisation (optionally coupled to a toxin). Vaccines are administered,
e.g. by injection, orally or through the skin, typically at 0.01-1000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 KKONPOVNHSQLNESHRKEDLQREEHSQKSDSTKDVTATVLDKNNISSKSTTNNPNK 144

```

```
The invention relates to an isolated polynucleotide consisting of a Streptococcus pneumoniae nucleic acid (appearing as ADC45122 and encoding SP028) one of 113 disclosed nucleic acids encoding 113 S. pneumoniae antigens. Also included are making a recombinant vector by inserting the nucleic acid into a vector, an isolated polynucleotide consisting of at least 50 or 100 contiguous nucleotides of the SP028 nucleic acid, and a recombinant hest call comprising the SP028 polynucleotide. The nucleic acids are useful as DNA vacaine against Streptococcus pneumoniae infection (e.g. pneumonia). Nucleic acids derived from the S. pneumoniae antigen nucleic acids are useful as probes for use in diagnostic methods for detecting S. pneumoniae gene expression. The present sequence represents an S. pneumoniae antigenic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Staphylococcus epidermidis SR1 strain; infection; diagnosis; vaccination; endocarditis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABQ84792 to ABQ84904 represents nucleic acids which encode the Streptococcus pneumoniae antigens given in ABP54557 to ABP54669. The S. pneumoniae antigens have antibacterial activity and can be used in vaccines. The S. pneumoniae antigens can also be used to prevent or attenuate a Streptococcal infection in an animal. The polynucleotides encoding the S. pneumoniae antigens can be used to detect Streptococcus nucleic acids. ABQ84905 to ABQ85130 represent primers used in the cloning of S. pneumoniae ORFs (open readding frames) which are used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                              New Streptococcus pneumoniae antigens, useful for detecting Streptococcus and for preventing or attenuating disease caused by Streptococcus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           28 YKGELEKGYQPDGWEISGFEGKKDAGYVINLSKDTPIKPVFKKIEEKKEEENKPTPDVSK 87

                                                                                                                                                                                                                                                                                                                                                                                             Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                             ଚ
                                                                     ANYE2304 to ANHE3970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (I) and have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. C. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their cativity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAHS5090 represent specifically claimed S. epidermidis genomic DNA crepresent olidonucleotide sequences from the present invention. AAHS5091 to AAHS5090 represent claims all the polynucleotide sequences are used in the sequence listing of the present invention. N.B. The present invention specifically claims all the polynucleotide sequences given in the sequence listing of the present specification, however the sequence is in the disclosure for SEQ ID NO:4465 to even though sequences are given in the contract of the present specification.
                                                                                                                                                                                                                                                                                                                                                                                                            8

ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        49 KKDAGYVIN--LSKDTFIKPVFKKIREKKEBENKPTFDVS----KKKDNPQVNHSQLNES 102

The invention describes an isolated mucleic acid comprising a nucleotide sequence with any of 3772 fully defined nucleotide sequences (SEQ ID NO: 1-3772) and encoding an Staphylococcus epidemidis polypeptide with any of 3772-fully defined amino acid sequences (SEQ ID NO: 3772-7544) as given in the specification. Also described are: a recombinant expression vector of [1]; producing an S. epidermidis polypeptide; an isolated nucleic acid (1); producing an S. epidermidis polypeptide; an isolated nucleic acid a undertion composition for prevention or treatment of an S. epidermidis infection, comprising a nucleic acid cited above and a carrier; treatment of a subject for S. epidermidis infection, a subject for S. epidermidis infection, a sembject for S. epidermidis infection, a subject for S. epidermidis infection, a subject for S. epidermidis polypeptide or its fragment; a vaccine composition for prevention or treatment of an S. epidermidis of infection, detecting the presence of a Staphylococcus nucleic acid in a sample; a computer readable medium having recorded in it the nucleotide sequences with NO: 1-3772 or its fragments; a computer based system for identifying fragments of the Staphylococcus genome of commercial importance; a computer based system for identifying an expression modulating fragment of the Staphylococcus genome and/or plasmids of commercial for the diagnosis, compositions of the present invention are useful for the diagnosis, the extendent of an Staphylococcal epidermidis protein of the the prevention and/or treatment of an Staphylococcal epidermidis protein of the the prevention and sequence of a Staphylococcal epidermidis protein of the the prevent invention are useful for the diagnosis, the extended the anino acid sequence of a S. epidermidis protein of the the prevent and the sequence of a Staphylococcus and the sequence of a Staphylococcus and the sequence of a Staphylococcus and the sequence of the sequence of a Staphylococcus and the sequence of the sequence of a Staphylococcus and the s
New isolated polypeptide and encoding nucleic acid derived from Staphylococcus epidermidis, useful for diagnosing, preventing and/or treating an S. epidermidis bacterial infection.
                                                                                                                                        Claim 17; SEQ ID NO 5663; 741pp; English

The invention relates to a chimeric molecule that comprises a glutamaterach protein (GLURP) moiety consisting of a polypeptide fragment (amino acid residues 25-514) of GLURP (given as SRQ ID No.1) and a Merozoite cated residues 22-514) of GLURP (given as SRQ ID No.2), wherein the chimeric molecule raises attribodies against both polypeptides in mice immunized with it. Also described are: (i) a conjugate comprising the chimeric molecule of the invention bound to a solid support, (ii) an immunogenic composition composition as an immunogenic composition at mixture of GLURP and MSP3 antigens as an immunogen, (iii) a vaccine against malaria comprising the chimeric molecule, the conjugate described above, or a mixture of GLURP and MSP3 antigens as an immunogen, in association with a suitable vehicle, (iv) use of purified and/or recombinant anti-MSP3 and anti-GLURP antibodies, for the preparation of a mixture of malaria, and (v) a medicament for passive immunotherapy of malaria, and (v) a medicament for passive antibodies. The chimeric molecule of the invention or a mixture of GLURP antibodies. The chimeric molecule of the invention or a mixture of GLURP antibodies. The chimeric molecule of the invention or a mixture of GLURP antibodies. The chimeric molecule of the invention or a mixture of GLURP and MSP3 antigens are useful for the preparation of a vaccine composition against malaria. This sequence represents plasmodium falciparum MSP3a to MSP3 fragment. Note: The present sequence given as SRQ ID No:7 in the Sequence Listing is not mentioned elsewhere in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         60 KDTFIKPVFKKIBEKKEB------ENKPTFDVSKKKDNPQVNHSQLNBSHRKE 106

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ሯ
                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                The present invention relates to the protection against malaria. More particularly, the invention pertains to a family of MSP-3 (merozoite surface protein 3)-like genes (MSP-3-1, MSP-3-3, MSP-3-3, MSP-3-3, MSP-3-4, MSP-3-6, MSP-3-7, MSP-3-1, MSP-3-8) located on chromosome 10 of Plasmodium falciparum, highly conserved in P. falciparum strains, simultaneously proteins which have a Asn-Leu-Arg-Asn or Asn-Leu-Arg-1ys signature at their N-terminal extremity and which are located at the merozoite surface. The characterization of this gene family enables the definition of immunogenic and vaccine compositions against P. falciparum. The present sequence is the P. falciparum MSP-3-1 protein.

The invention relates a recombinant bink construct compitating a pure invention relates ar recombinant bink construct compitation between the property compitation and encoding a polypeptide with any of 5544 amino acid sequences (SEQ ID NO: 5554-1108B). The cubka and proteins are from corn. soybean, Arabidopsis, wheat and rape but the specification does not indicate which sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a plant with a recombinant DNA construct comprising a promoter region that with a recombinant DNA construct comprising a promoter region of the plant with a recombinant DNA construct comprising a promoter region of the property, and growing the transformed plant. The property is selected from improving plant cold tolerance, for plant. The property is selected from improving plant cold tolerance, for providing increasing creatistance to plant disease, for glactomanan production, for production of plant tolerance to or plant disease, for improving plant tolerance to or plants of the plants, for increasing the rate of plant tolerance to extreme osmotic conditions, for improving plant tolerance to colarance to extreme osmotic conditions, for improving plant tolerance to extreme osmotic conditions, for improving plant colerance to extreme osmotic conditions, for improving plant colerance to extreme osmotic conditions, for improving plant derecombination in plants, for yield indrovement by modification of colerance to pathogens or peets, for yield indrovement by conditions are and for yield improvement by providing improved plant growth and for yield improvement by providing improved plant growth and development under at least one stress condition. The polynucleotide may calso encode a plant transcription factor. The methods and compositions of the present invention are useful in the field of blochemistry and condition all plants with improve and plant plants with a plant plants with a plant plants and composit
                                                                                                                                                                                                                                                                                                                                                                                                                                            New recombinant DNA constructs useful in the field of blochemistry and genetics, and in particular for producing transgenic plants with improved biological characteristics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  84 NRVTDIVQNNSNGESK------YVQDLARRIRYDE-EATGSQSAQRIDHPNQKNV 131
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               132 GITEKAPENSPIEETSHRVDDNKRINNQKNPTAAKSSENAVSRVSFGADHKRAEVMGKPM 191

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ----- PQ 93
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       flow, increasing plant tolerance to cold or heat, improving plant tolerance to extreme osmotic and dirought conditions, and improving plant tolerance to extreme osmotic and dirought conditions, and improving plant tolerance to plant peets or pathogens. They can also be used in physical arrays of molecules, plant breeding markers, computer-based storage and analysis systems. The present sequence is one of the 5544 plant protein sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         192 ENRDQVRQTESAEKSHRKENVTKSEKPRDQEGVKKTEAKDKDRNKEKKEEKTESTNK 248
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       94 VNHSQLNE-----SHRKEDLQREEHSQKSDSTKDVTATVLDKNNISSKSTTNNPNK 144

The invention relates to a chimeric molecule that comprises a glutamaterach protein (GLURP) moiety consisting of a polypeptide fragment (amino acid readluse 25-514) of GLURP (given as SEQ ID No:1) and a Merozoite surface protein 3 (MSP3) moiety consisting of amino acid residues 212-380 of MSP3 (given as SEQ ID No:2), wherein the chimeric molecule raises attibodies against both polypeptides in mice immunized with it. Also described are: (i) a conjugate comprising the chimeric molecule of the invention bound to a solid support, (ii) an immunogenic composition comprising the chimeric molecule, the conjugate described above, or a mixture of GLURP and MSP3 antigens as an immunogen, iii) a vaccine against malaria comprising the chimeric molecule, the conjugate described above, or a mixture of GLURP and MSP3 antigens as an immunogen, in association with a suitable vehicle, (iv) use of purified and/or recombinant anti-MSP3 and anti-GLURP antibodies, for the preparation of a medicament against malaria, and (v) a medicament for passive immunotherapy of malaria, comprising the anti-MSP3 and anti-GLURP antibodies. The chimeric molecule of the invention or a mixture of GLURP and MSP3 antignes are useful for the preparation of a adainst malaria. This sequence represents Plasmodium falciparum GLURP (27-500)-MSP3 (212-380) fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           HRVTVTIQNGKEM------GYQ 37
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PD-GWEISGF--EGKKDAG----YVINLSKDTFIKPVFKKIEEKKEEENKPTFDVSKCK 89

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a fusion protein comprising Plasmodium falciparum glutamate-rich protein (GLURP) coupled to P. falciparum merozoite surface protein 3 (MSP3). The GLURP-MSP3 fusion protein is useful as an antigen based vaccine against malaria. Also disclosed is the polynucleotide sequence encoding the GLURP-MSP3 fusion protein. The polynucleotide sequence is also useful in preparing a vaccine. The vaccine is useful in treating and preventing malaria and for inducing an immune response against malaria. The present sequence represents P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  90 DNPQVNHSQLN------ESHRKEDLQREEHSQKSDSTKDVTATVLDKNNISSK 136

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a fusion protein comprising Plasmodium falciparum glutamate-rich protein (GLURP) coupled to P. falciparum morzozite surface protein 3 (MSP3). The GLURP-MSP3 fusion protein is useful as an antigen become encoding the GLURP-MSP3 fusion protein is polynucleotide sequence encoding the GLURP-MSP3 fusion protein. The polynucleotide sequence encoding the GLURP-MSP3 fusion protein. The vaccine is useful in treating and preventing a vaccine. The immune response against malaria. The present sequence represents P. falciparum GLURP-MSP3 hybrid.

                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  by chromosome 2 of the human malarial parasite, Flasmodium falciparum.

Also described are: (1) mucleotide sequences (II) encoding (I); and (2)

vaccines against P. falciparum infection comprising (I) or (II). (I) and

(II) are useful for the development of vaccines against P. falciparum

infection. (I) and polyclonal antisera or a monoclonal antibody raised to

immunogens comprising the sequences of (I), are useful in the detection

of infection with P. falciparum. Furthermore, (I) (especially when they

are rifins or secreted or membrane proteins) can aid the identification

of drugs to treat or prevent P. falciparum infection, or they can be used

to identify drug resistance in P. falciparum. Sequencing of the

Plasmodium chromosome 2 and the subsequent identification of proteins

cencoded by it will help to expand our understanding of parasite biology,

a process hampered by the complexity of the parasitic lifecycle, and

provide new targets for vaccine and drug development. Parasite resistance

to drugs and mesquito resistance to insecticides have led to a resurgence

of malaxia in many parts of the world, and there is a pressing need for

vaccines and new drugs. AAA7027 and AAB18152

The present invention relates to a method for identifying candidate proteins in pathogens useful as anti-infectives. The invention discloses a computational method which involves the calculation of several sequence atributes and their subsequence analysis results in the identification of outlier proteins in different pathogens. The method is useful for the identification of outlier proteins (e.g. virulence proteins, antigens or proteins used as drug targets) in pathogenic organisms. The method of the invention provides reproducible results as it does not depend on the variable biochemical characterisation of proteins. ABO23500-ABO23617 represent outlier proteins identified from different pathogenic organisms

rich protein (GLURP) moiety consisting of a polypeptide fragment (amino acid residues 25-514) of GLURP (given as SEQ ID No:1) and a Merozoite surface protein 3 (MSP3) moiety consisting of amino acid residues 212-380 of MSP3 (given as SEQ ID No:2), wherein the chimeric molecule raises antibodies against both polypeptides in mice immunized with it. Also described are: (i) a conjugate comprising the chimeric molecule of the invention bound to a solid support, (ii) an immunogenic composition composition mixture of GLURP and MSP3 antigens as an immunogen, (iii) a vaccine against malaria comprising the chimeric molecule, the conjugate described above, or a mixture of GLURP and MSP3 antigens as an immunogen, in a machine malaria comprising the chimeric molecule, the conjugate described above, or a mixture of GLURP and MSP3 antigens as an immunogen, in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     association with a suitable vehicle, (iv) use of purified and/or recombinant anti-MSP3 and anti-GLURP antibodies, for the preparation of a medicament against malaria, and (v) a medicament for passive immunotherapy of malaria, comprising the anti-MSP3 and anti-GLURP antibodies. The chimeric molecule of the invention or a mixture of GLURP and MSP3 antigene are useful for the preparation of a vaccine composition against malaria. This sequence represents Plasmodium falciparum MSP3 protein (amino acid residues 212-380).

the 6113 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                           Antisense, prokaryotic essential gene, cell proliferation, drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid comprising any one of

..
compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for cellular proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. acruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                   119
                                                                                                                                                                                                                                                                                                                      New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense
                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                   66 PVFKKIEEKKEEENKPT-----FDVSKKKDNPQVNHSQLNESHRKEDLQREHSQKSDS

useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL016175) and the encoded proteins (ABB57737-ABB77272). The sequence data for this patent did not form part of the from MIPO at ftp.wipo.int/pub/published_pct_sequences

nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the artisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway.

CC dentifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product liss or a gene on which the test compound that inhibits proliferation of an pathway in which a proliferation-required gene or its gene product liss or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profilling a compound activity; (11) a culture compound that inhibits the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for proliferation in cells other than S. typhimurium, complicative prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the present action of the present directly from WIPO at the present action of the present directly from WIPO at the present action of the present directly from WIPO at the present action of the present directly from WIPO at the present action of the present directly from WIPO at the present directly produced by the present directly from WIPO at the present directly directly directly directly d

hybrid polypeptide. This is an example of claimed hybrid polypeptide immunogens of the invention ADM88439-ADM88474 that comprise a modified Scaureus ORPO657n sequence ADM88433-ADM88474 that comprise a modified Scaureus ORPO657n sequence ADM88433-ADM88434 that comprise a modified Scaureus ORPO657n sequence ADM88433-ADM88432. The hybrid polypeptides contain one or more epitopes for ORPO657n and ORPO190. They were designed by taking into account the similarity and alferences between native ORPO657n and ORPO190 protein sequences. The invention also provides mucleic acids encoding these hybrid polypeptides, and a method for evaluating the ability of an immunogen to produce a protective immune response against Staphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides having therapeutic and diagnostic applications, such as being used to provide protective immunity against S. aureus infection, being used to generate antibodies to therapeutic antibodies that target S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                53 GYVINLSKDTFIKPVFKKIEEKKEEENKPTFDV----SKKKDNPQVNHSQLNESHRKED 107

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                      The invention relates to a novel isolated mitical and adhesion factor or is fragment. The invention farther comprises a vector comprising the above nucleic acid molecule; a cell, preferably a host cell, comprising the above nucleic acid molecule; a cell, preferably a host cell, comprising the above nucleic acid molecule; a process for producing the above code of the dependent factor, comprising an amino acid sequence encoded by the above nucleic acid molecule; a process for producing the above propertied or its fragment; a process for producing a cell that comprising the polypeptide or its fragment; a process for producing the above polypeptide or its fragment; a pharaceutical composition, especially a vaccine, comprising the polypeptide or its fragment, or the polypeptide or its fragment, or the polypeptide or its fragment, or the polypeptide or its fragment code the polypeptide or its fragment or inhibiting the activity of the polypeptide or its fragment to its interaction partner; code the polypeptide or its fragment to its interaction partner; an antagonist identified by the above method; processes for in vitro collagnosis of a bacterial infection, preferably Streptococcus agalactiae infection, or a disease related to the expression of the above polypeptide or its fragment; and an affinity device comprising a support material and immobilized to the support material the above polypeptide or its fragment; and an affinity device comprising or antibacturing a mucleic acid molecule. The fibrinogen-binding polypeptide has antibacturing a medicament, especially a vaccine against bacterial contracturing a medicament is used for manufacturing a medicament, especially a vaccine against bacterial infections, especially S. agalactiae infections. The polypeptide or its fragment for treating or generating or contracturing a medicament generating a medicament of the polypeptide or its fragment, or for generating an enteraction partner of the polypeptide or its fragment, or for generating and/or identifying an interaction

nucleotide sequences encode polypeptides of S. agalactiae involved in the synthesis of amino acids, cell membranes, intermediate (central) metabolism, energetic metabolism, fatty acid and phospholipid metabolism, nucleotide metabolism, energetic metabolism, fatty acid and phospholipid metabolism, nucleotide metabolism including purines, pyrimidines and/or nucleosides, regulatory functions, replication, transcription, translation, protein transport, adaptation to atypical conditions, sensitivity to medicines and/or analogues, functions related to transposons, biosynthesis of cofactors, prosthetic groups and transposters, cell membrane proteins and cellular machinery. (I) are useful for the detection and/or amplification of nucleic acids. Pharmaceutical composition comprising (I) or [II] are useful for the detection and/or amplification described by the present patent of a bacterial S. agalactiae infection. The complete present patent is an equivalent for the basic patent FR2824074A1, which contains only, 244 accordances.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   57 NLSKOTFIKPVFKKIEEKKEEENKP'FFDVSKKKONPQVNHSQLNESHRKEDLQREEHS-- 114
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Genomic nucleotide sequences encoding polypeptides of Streptococcus agalactiae for the development of vaccines, diagnostic tools, DNA chips
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to novel Streptococcus agalactiae nucleotide sequences (I; ADV78860-ADV78998 and ADV83341-ADV85476) and novel polypeptides (II; ADV78999-ADV81203 and ADV81205-ADV83340). The present introduced (1) ADV78860-ADV78998 and ADV83341-ADV85476) and nucleotide sequences (1) ADV78999 and ADV83341-ADV85476) and nucleotide sequences encode polypeptides of S. agalactiae involved in the synthesis of amino acids, cell membranes, intermediate (central) metabolism, energetic metabolism, fatty acid and phospholipid metabolism, nucleotide metabolism, including purines, pyrimidines and/or nucleosides, regulatory functions, replication, transcription, translation, protein transport, adaptation to atypical conditions, sensitivity to medicines and/or analogues, functions related to transposens, biosynthesis of cofactors, prosthetic groups and transporters, cell membrane proteins and cellular machinery. (1) are useful for the detection and/or amplification of nucleic acids. Pharmaceutical composition comprising (I) or (II) are useful for the detection. The complete genome of Streptococcus agalactiae is given in ADV81204. Note: The present patent to fa a pacterial S. agalactiae infection. The complete genome of Streptococcus agalactiae is given in ADV81204. Note: The present patent patent for the basic patent FR2824074Al, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | : :: | | : : | | : | | 321 NTEPLISYLENKEKFLYPNIPYKNKLILREEDKYSFEDDEEBFGNELLSYNKLKNEVLPV 380
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            57 NLSKOTFIKPVFKKIERKKERENKPTFDVSKKKONPQVNHSQLNESHRKEDLQREEHS-- 114

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to novel Streptococcus agalactiae

"Conclectide sequences (I; ADV87607-ADV87745) and novel polypeptides (II;

"ADV87746-ADV89550). The nucleotide sequences encode polypeptides of S.

"ADV87746-ADV89550). The nucleotide sequences encode polypeptides of S.

"Concletion involved in the synthesis of amino acids, cell membranes,

"Thermediate (central) metabolism, energetic metabolism, fatty acid and

"Proposition transporters regulatory functions, replication,

transcription, translation, protein transport, adaptation to atypical

conditions, sensitivity to medicines and/or analogues, functions related

"Conditions, sensitivity to medicines and/or analogues, functions related

to transpoorters, cell membrane proteins and cellular machinery. (I) are

useful for the detection and/or amplification of nucleic acids.

"Pharmaceutical composition comprising (I) or (II) are useful for

treatment of a bacterial S. agalactiae infection. Note: W0200292818A2 is

contains 6617 sequence whereas the present patent only contains 2344
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | : ::| | ::| | :| | | :| | 321 NTEPLITSYLENKEKPLVPNIPYKAKLILREEDKYSFEDDEEBFGNELLSYNKLKNEVLPV 380
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          57 NLSKOTPIKPVPKKIEEKKGEEENKPTPDVSKKKDNPQVNHSQLNESHRKEDLQREEHS-- 114
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Genomic nucleotide sequences encoding polypeptides of Streptococcus agalactiae for the development of vaccines, diagnostic tools, DNA chips and identification of therapeutic targets.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9 NGKEMSSTIVSEEDFILP--VYKGEL----EKGYQFD-----GWEISGFEGKKDAGYVI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is that of a Staphylococcus aureus protein ORF0657n hybrid polypeptide. This is an example of claimed hybrid polypeptide. This is an example of claimed hybrid polypeptide. This is an example of claimed hybrid polypeptide immunogens of the invention ADW88433-ADW88414 that comprise a modified S. aureus ORF0657n sequence ADW88433 containing amino acid substitutions that increase sequence similarity to ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes for ORF0557n and offerences between native ORF0557n and ORF0190 protein sequences. The invention also provides nucleic acids encoding these hybrid polypeptides, on a method for evaluating the ability of an immunogen to produce a protective immune response against Estaphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides having therapeutic and diagnostic applications, such as being used to provide protective immunity against S. aureus, and being used to generate antibodies to therapeutic antibodies that target S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          355 SVENSESEMENDIFVEH----PIKTGTLNGKKYMVMKTTNDDYWKDFMVEGKR----VRTI 405

The present sequence is that of a Staphylococcus aureus protein ORF0657n hybrid polypeptide. This is an example of claimed hybrid polypeptide. This is an example of claimed hybrid polypeptide. This is an example of claimed hybrid polypeptide invention ADM88439. ADM88448 containing amino acid substitutions that increase sequence similarity to ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes for ORF0190 ADW88432. The corporate of the similarity and differences between native ORF057n and ore more epitopes for ORF0190 ADW88432. The invention also provides nucleic acids encoding these hybrid polypeptides, and amethod for evaluating the ability of an immunogen to produce a protective immune response against Staphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides having therapeutic and adagnostic applications, such as being used to provide protective immunity against S. aureus infection, being used to generate antibodies to the rarget S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          10,

```
hybrid polypeptide. This is an example of claimed hybrid polypeptide.

Immunogens of the invention ADW88439-ADW88474 that comprise a modified S. aureus ORFOGEN sequence ADW88431-ADW88474 that comprise a modified S. aubstitutions that increase sequence similarity to ORFO190 ADW88432. The hybrid polypeptides contain one or more epitopes for ORFO557 and CRPO190. They were designed by taking into account the similarity and differences between native ORFO577 and ORFO190 protein sequences. The invention also provides nucleic acids encoding these hybrid polypeptides, on a method for evaluating the ability of an immunogen to produce a protective immune response against Staphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides having therapeutic and diagnostic applications, such as being used to provide protective immunity against S. aureus infection, being used to generate antibodies to detect the presence of S. aureus, and being used to generate antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              465
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    35 SVENSESMADTFVEH-----PIKTGTLNGKKYMVMKTTNDDYWKDFMVEGKR----VRTI 405

The present sequence is that of a Staphylococcus aureus protein ORF0657n hybrid polypeptide. This is an example of claimed hybrid polypeptide immunogens of the invention ADW88439-ADW88474 that comprise a modified Saureus ORF0657n sequence ADW88433-ADW88438 containing amino acid substitutions that increase sequence similarity to ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes for ORF0657n and ORF0190. They were designed by taking into account the similarity and differences between native ORF0657n and differences between active or more acid sequences. The invention also provides nucleic acids encoding these hybrid polypeptides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       470 NSAKKEATPATPSKPTPSPVEKESQKQDSQKDDNKQLPSVEKENDASSESGKDKTPATKP 529

The present sequence is that of a Staphylococcus aureus protein ORF0657n hybrid polypeptide. This is an example of claimed hybrid polypeptide immunogens of the invention ADW88433-ADW8844 that comprise a modified S. aureus ORF0657n sequence ADW88433-ADW8848 containing amino acid substitutions that increase sequence similarity to ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes for ORF0657n and differences between native ORF0190 protein sequences. The invention also provides nucleic acids encoding these hybrid polypeptides, on a method for evaluating the ability of an immunogen to produce a protective immune response against Staphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides having therapeutic and diagnostic applications, such as being used to provide protective immunity against S. aureus infection, being used to generate antibodies to detect the presence of S. aureus, and being used to generate antibodies the target S. aureus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of a Staphylococcus aureus protein ORF0657n hybrid polypeptide. This is an example of claimed hybrid polypeptide immunogens of the invention ADW8843-ADW8844 that comprise a modified S. aureus ORF0657n sequence ADW88443-ADW88438 containing amino acid substitutions that increase sequence similarity to ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes for ORF0657n and oRF0190. They were designed by taking into account the similarity and differences between native ORF0657n and ORF0190 protein sequences. The invention also provides nucleic acids encoding these hybrid polypeptides, and method for evaluating the ability of an immunogen to produce a protective immune response against Staphylococcus infection using an animal (mouse or rat) model. The hybrid polypeptides having thesapeutic and diagnostic applications, such as being used to provide protective immunity against S. aureus infection, being used to generate antibodies to therapeutic antibodies that target S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               355 SVENSESMMDTFVEH----PIKTGTLNGKKYMVMKTTNDDYWKDFMVEGKRVRTISKDA 409

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is that of a Staphylococcus aureus protein ORF0657n hybrid polypeptide denoted 0657nHybrid3. This is an example of claimed hybrid polypeptide immunogens of the invention ADW88439-ADW88434 that comprise a modified S. aureus ORF0657n sequence ADW88433-ADW88438 containing amino acid substitutions that increase sequence similarity to ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes or ORF0190 ADW88432. The hybrid polypeptides contain one or more epitopes for ORF0190 ADW88432. The hybrid polypeptides of a more epitopes of the invention also provides nucleic acids encoding these immunogen to produce a protective immunity against S. aureus infection, being used to generate antibodies to detect the presence of S. aureus, and being used to generate therapeutic antibodies that target S. aureus.
